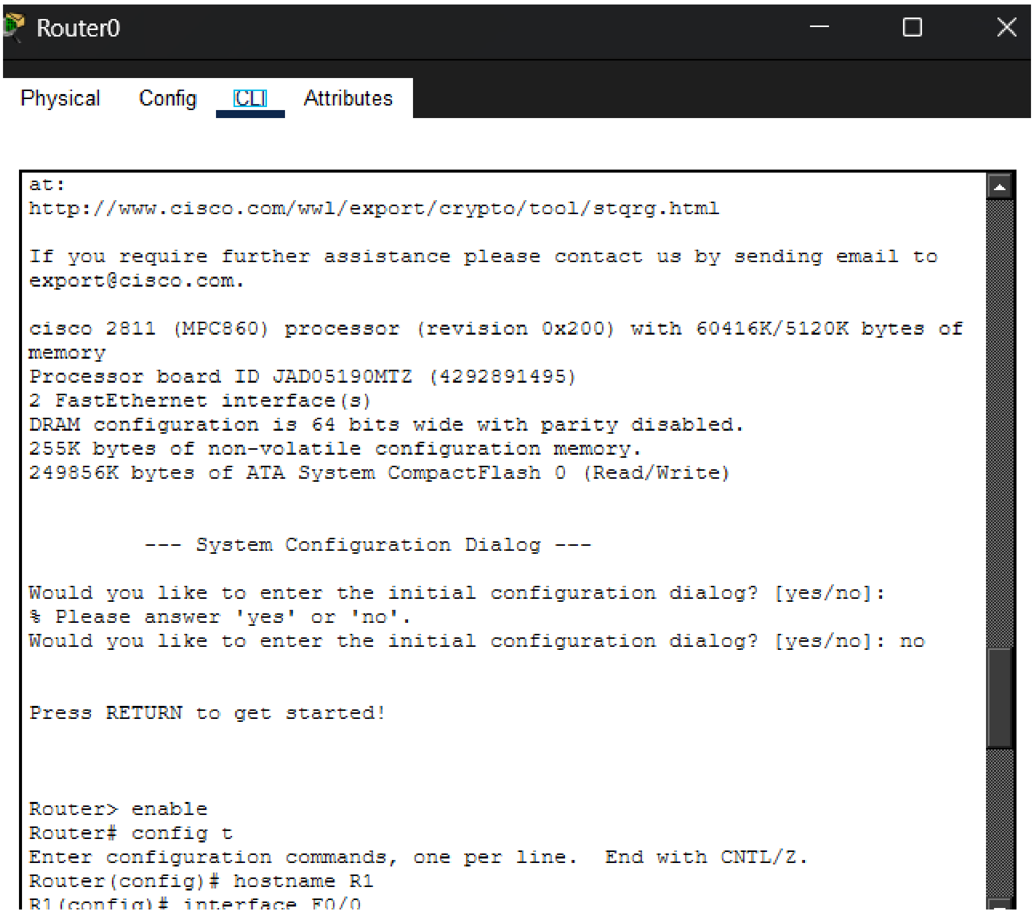
Ryno Badenhorst Week 5 NET512 Prac



```
at:
http://www.cisco.com/wwl/export/crypto/tool/stqrg.html

If you require further assistance please contact us by sending email to
export@cisco.com.

cisco 2811 (MPC860) processor (revision 0x200) with 60416K/5120K bytes of
memory
Processor board ID JAD05190MTZ (4292891495)
2 FastEthernet interface(s)
DRAM configuration is 64 bits wide with parity disabled.
255K bytes of non-volatile configuration memory.
249856K bytes of ATA System CompactFlash 0 (Read/Write)

         --- System Configuration Dialog ---

Would you like to enter the initial configuration dialog? [yes/no]:
% Please answer 'yes' or 'no'.
Would you like to enter the initial configuration dialog? [yes/no]: no

Press RETURN to get started!

Router> enable
Router# config t
Enter configuration commands, one per line.  End with CNTL/Z.
Router(config)# hostname R1
R1(config)# interface F0/0
```

SW1(config)# interface F0/2
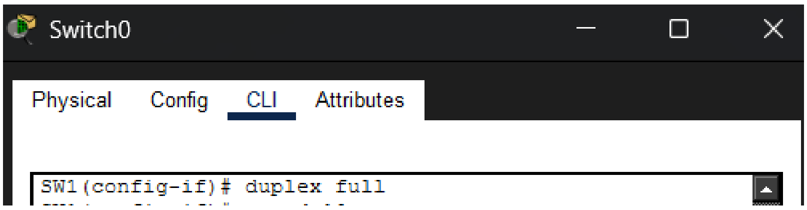
SW1(config-if)# duplex half

43.



Switch0
Physical
Config
CLI
Attributes
SW1(config-if)# duplex full

44.

45. &46. 
47. A duplex mismatch causes late collisions and dropped packets on the half-duplex side, while the full duplex side generates Frame Check Sequence errors. This happens because the full duplex device transmits continuously without checking the line, interrupting the half duplex device which relies on CSMA/CD to listen for a clear channel before sending.
