Switch>enable
Switch#?
Exec commands:
clear         Reset functions
clock         Manage the system clock
configure     Enter configuration mode
connect       Open a terminal connection
copy          Copy from one file to another
debug         Debugging functions (see also 'undebug')
delete        Delete a file
dir           List files on a filesystem
disable       Turn off privileged commands
disconnect    Disconnect an existing network connection
enable        Turn on privileged commands
erase         Erase a filesystem
exit          Exit from the EXEC
logout        Exit from the EXEC
more          Display the contents of a file
no            Disable debugging informations
ping          Send echo messages
reload        Halt and perform a cold restart
resume        Resume an active network connection
setup         Run the SETUP command facility
show          Show running system information
ssh           Open a secure shell client connection
telnet        Open a telnet connection
terminal      Set terminal line parameters
traceroute    Trace route to destination
undebug       Disable debugging functions (see also 'debug')
write         Write running configuration to memory, network, or terminal

Physical Config Desktop Programming Attributes
Terminal
% Incomplete command.
Switch#?
clear clock configure connect copy
Switch#config
Switch#configure
Configuring from terminal, memory, or network [terminal]?
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)#?
Configure commands:
  aaa                Authentication, Authorization and Accounting.
  access-list        Add an access list entry
  banner             Define a login banner
  boot               Boot Commands
  cdp                Global CDP configuration subcommands
  clock              Configure time-of-day clock
  crypto             Encryption module
  default            Set a command to its defaults
  do-exec            To run exec commands in config mode
  dot1x              IEEE 802.1X Global Configuration Commands
  enable             Modify enable password parameters
  end                Exit from configure mode
  exit              Exit from configure mode
  hostname           Set system's network name
  interface          Select an interface to configure
  ip                 Global IP configuration subcommands
  line               Configure a terminal line
  lldp               Global LLDP configuration subcommands
  logging            Modify message logging facilities
  mac                MAC configuration
  mls                mls global commands
  monitor            SPAN information and configuration
  no                 Negate a command or set its defaults
  ntp                Configure NTP
  port-channel       EtherChannel configuration
  privilege           Command privilege parameters
  sdm                Switch database management
  service            Modify use of network based services
  snmp-server        Modify SNMP engine parameters
  spanning-tree       Spanning Tree Subsystem
  tacacs-server       Modify TACACS query parameters
  username           Establish User Name Authentication
  vlan               Vlan commands
  vtp                Configure global VTP state
