Summary:

To complete this task, I connected a pc and a router together using a console cable and opened the terminal on the PC and pressed Enter. This allowed me to enter the User EXEC mode and using the ? command I was able to explore all the available commands and practice basic show commands as well as in the Privileged EXEC mode I was able to access the global configuration mode using configure terminal and using the ? Command again I was also able to view all the configuration modes at my disposal.
